Parental Involvement in Childhood Education

Parental involvement in education also aids kids’ social functioning. In particular, kids with involved parents have better peer interactions than kids with uninvolved parents. Their social skills also seem to be more advanced. Notably, advanced social skills, in turn, lead to better academic outcomes.

As child development programs re-open or begin virtual interactions, teachers and families will need to make enhanced, comprehensive, and personalized efforts to engage students. One strategy that can be effective is to involve families in the educational process, thereby extending learning beyond the classroom.

Parental Involvement in childhood education helps improve learning outcomes for children by ensuring that they have all the support they need to develop to their full potential - emotionally and academically. That is why programs like Head Start and Early Head Start highly encourage parent and family participation, with the belief that a parent’s involvement is essential not only to the success of the child, but also to the program.

The Importance of Parental Involvement in Early Childhood Education

Parental involvement is a critical component of early childhood education. It is important for parents to spend some time regularly with their children. This is because children not only learn through books but also through association with their parents. The benefits of parental involvement may include:

- Enhanced learning beyond the classroom
- Better academic outcomes
- Improved social skills

Why Parental Involvement is So Important in Early Childhood Education

As parents, you are your child’s first and most important teacher. Parents have a hugely important role to play in shaping literacy, social and emotional skills. Parental involvement impacts directly and indirectly on a child’s learning. Here are some tips on how you can involve yourself in your child’s development.
